DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/17/06 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 - 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 6,500,200 to Kushnir in view of US Patent No. 5,733,319 to Neilson et al.

In regards to claims 1 – 12, Kushnir discloses a closed loop heating system including a plurality of inflatable bladders (Figure 1) in a series flow path; a reservoir (90); and a fluid flow path comprising an inflow line (60) and an outflow line (62) for placing the bladders in fluid communication with the reservoir. Kushnir discloses at least 6 inflatable bladders (Figure 1) and a mechanical link (Col. 4, lines 30 – 33) between the bladders. A heat exchange fluid is contained within the closed loop (Col. 5, line 58). Kushnir discloses each bladder having a width of no more than about 2 inches, a length of no more than about 3 inches, and a thickness of no more than about 1 inch (Col. 2, lines 37 – 44). Kushnir fails to disclose the reservoir being a compressible

container and the closed loop system being free of a pump, wherein the closed loop system can be operated and removed without exposing a fluid within the closed loop system to the outside of the closed loop system. However, Neilson et al. discloses a closed loop system including a compressible reservoir (110; Col. 8, line 40) and being free of a pump, wherein the closed loop system can be operated and removed without exposing a fluid within the closed loop system to the outside of the closed loop system (Col. 6, lines 15 – 20). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the reservoir and closed loop system as disclosed by Kushnir to include a compressible container and to be free of a pump, wherein the closed loop system can be operated and removed without exposing a fluid within the closed loop system to the outside of the closed loop system as taught by Neilson et al. in order to allow the closed loop system to be disposable to thereby eliminate otherwise necessary cleaning and sterilization of non-disposable, fixed heat transfer units (Col. 6, lines 15 – 20).

Response to Arguments

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
